Curb Ramps
4.7

Scoping and Application
4.1

TDLR recognizes the need to form a stable framework in concrete surfaces for proper alignment and installation of paver inserts at curb ramps. For purposes of design, TDLR will accept a border not exceeding four inches (4") at the sides, top and bottom of the curb ramp surface in lieu of "extending the full length and width" of the curb ramp as mentioned in TAS 4.7.4.

An example of a typical application is illustrated below:
