

This intensive five-day seminar covering each area of pressure relief valves provides management, QC personnel, and supervisors the latest and most in-depth information available. Topics include inspection, assembly, and repair. In addition, the course offers an overview of the "VR" Certificate program.

APRIL 28-MAY 2

# National Board Valve Repair Seminar

National Board expert instructors come directly from the industry as well as the National Board's world-renowned testing lab and provide excellent real-world teaching scenarios. Students gain practical knowledge on preparing quality control programs, repair and alteration rules, qualifications and use of standard welding procedures, basic codes of construction, and compliance with jurisdictional requirements.
